

PSR(4): ZAPP Edge Opt-in Propensity

ZEDI: Model Re-train Updates

July 2026

Our Goal

Develop a predictive model that identifies providers(both circle-backs and undecideds) most likely to opt in to ZAPP Edge payments, by providing targeted outreach.

What changed with the new model for re-training?

What Did We Do?

Version 2.0

- ✓ Uses newer, expanded data.
- ✓ Refreshed the numbers with the latest activity.
- ✓ Added new data/features we did not track before.
- ✓ We updated the type of model doing the predicting.
- ✓ We now show the top reasons behind each prediction.

The Data Was Used

What We Used It For	Time Period	How Often Providers Said Yes	Why It Matters
Training Data	Oct 2024 - Sep 2025	0.12%	Used to build and teach the model
Testing Data	Oct - Dec 2025	0.16%	Used to check how well the model works on providers it has not seen before
Future Data	Jan- Mar 2026	0.1%	Used to see how the model performs going forward

What We Look At

INFORM

DISCUSS

DECIDE

New predictors were added to the ones that already worked in the production model.

New in This Version

- **Recent payment amount** – Total check payment amount in the past 90 days
- **Provider contact activity** – Number of disposition-related phone contacts in the last 90 days
- **Recent opt-outs** – Total number of times they've said no in the last year
- **Account tenure** – Number of days since the provider account was created
- **Cancelled payment count** – Total number of cancelled check payments
- **ACH+ payment volume** – Total number of ACH+ payments received during the observation period
- **Payer reach** – Number of unique payers the provider received payments from during the observation period

Already in the Model

- **Payment momentum** – Whether the rate of recent payments are increasing or decreasing
- **Recent payment activity** – Days since their last check payment
- **Average payment value** – Average check payment amount in the past 30 days
- **Cancelled payment recency** – Days since their last cancelled check payment
- **Provider type** – Whether they are a medical provider or not

Results

The model sorts providers into groups, from most likely to least likely to opt-in.

Chance Group	Share of Providers	Chance They Say Yes	How Many We Find	Result
Very High	~2%	About 1 in 57	29% of all opt-ins	Best group to call
High	~8%	About 1 in 263	27% of all opt-ins	Strong group to call
Medium	~17%	About 1 in 522	29% of all opt-ins	Lower priority
Low	~17%	About 1 in 1549	10% of all opt-ins	Skip
Very Low	~56%	Very rare(1 in 16254)	3% of all opt-ins	Skip

* Based on early results from new, unseen data

What does this mean for you?

With this new model, if the PE team calls just the top **10% of providers** the model flags, they will reach about **56% of all the providers** who are predicted to opt in!

Old Model vs. New Model

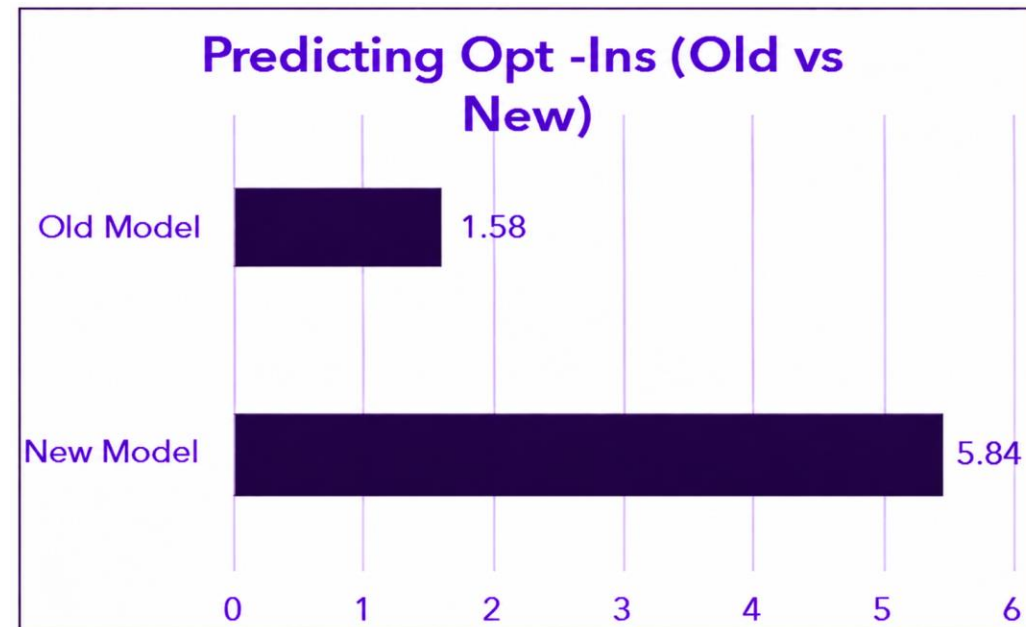

INFORM

DISCUSS

DECIDE

The new model is much better at finding providers who will say yes

What We Compared	Old Model	New Model
Finding likely opt-ins	1.5x better than guessing	Almost 6x better than guessing
Finding follow-up providers	2x better than guessing	Almost 5x better than guessing
Finding undecided providers	1.5x better than guessing	Almost 16x better than guessing
Overall improvement	–	289% better

*Compared using new information the model has not seen before

Top Reasons A Provider Said Yes

INFORM

DISCUSS

DECIDE

These clues help our sales team know who to call first

What the model noticed about three real provider examples:

Provider 1: Very High Opportunity

Top reasons the Model flagged this provider:

- Number of distinct payers associated with the account: **38**
- Calls made to them in the last 90 days: **4**
- Check payments received in the last 90 days: **3**

Provider 2: High Opportunity

Top reasons the Model flagged this provider:

- Number of distinct payers associated with the account: **9**
- Check payments received in the last 90 days: **5**
- Age of the account since creation: **1438**

Provider 3: Moderate Opportunity

Top reasons the Model flagged this provider:

- Times they've said no before: **2**
- Check payments received in the last 90 days: **3**
- Provider type (Medical or Dental): **Medical**
